SUBJECT: Turbu-Flow Testimonial - **And it works!!!**

Dear Earl,

I live in rural Queensland in a little town called Derrymore. My household water supply is from a bore, and unfortunately its "Spa water". Our "Spa water" is high in calcium and iron amongst other things but it is these two elements that cause me the most grief. The calcium builds up on every surface and is difficult to remove and the iron stain is just impossible. My shower was a horrible orange colour and the toilet leaked constantly as the build up of deposits in the cistern wouldn't let it close properly. You name it and I used it to try and remove the stains and the build up, from a range of general bathroom cleaners to bleach, even CLR (Calcium, Lime, Rust) remover and **nothing worked! I spent literally hours scrubbing and to no avail.** Eventually I found Enjo Calcium Dissolver, and while this helped with the calcium problem it really didn't do much for the iron stain and it would still take me hours.

I decided to undertake some renovations and strip the bathroom and start again but I didn't know what to do about my water problem. I searched on the internet and came across "Turbu - Flow". I wasn't sure whether it would work but I was willing to give anything a go to keep my new tiles clean and my toilet white so when I was offered a unit to try and if I wasn't happy a refund I thought well why not?

And it works!!! While I still get the iron staining, though not nearly as much, I can now clean it off with ease, it's amazing! I really didn't think it would work but so far (fingers crossed) it is! Just a little calcium dissolver and some elbow grease and its gone. Thanks to the "Turbu-Flow" I no longer need to spend all day trying to scrub the shower just 5 minutes and its back to sparkling like new. I am definitely happy with the results and would recommend anyone with the same problems to give it a try.

Cheers

Heidi
